

Product Data Sheet

Cat # AB-16310

Anti Hepatitis B Surface Antigen A IgG

Size: 1 ml

5 ml

Type:

Polyclonal Goat Antibody

Introduction:

Hepatitis B is one of a few known non-retroviral viruses which employ reverse transcription as a part of its replication process. (HIV, a completely unrelated virus, also uses reverse transcription, but it is a retrovirus.) HBV invades the cell by binding to surface receptor and become internalized. The viral core particles then migrate to the hepatocyte nucleus and the partially double-stranded, relaxed circular genomes (RC-DNA) are repaired to form a covalently closed circular DNA (cccDNA), which is the template for viral genomic and sub-genomic RNAs by cellular RNA polymerase II. Of these, the pregenomic RNA (pgRNA) is selectively packaged into progeny capsids and is then reverse-transcribed into new RC-DNA. The core can either bud into the endoplasmic reticulum to be enveloped or exported from the cell or recycled back into the genome for conversion to cccDNA.

Product Description:

Affinity-purified Goat antibodies against the Native Ad/AyHBsAg antigens. 1mg/ml in PBS, was passed through a 0.2um Filter into a 50ml sterile conic Tube.

Storage:

Store at -20C.

Stability:

One year frozen. One month in solution at 4C.

Specificity:

Immunoreactive with all HBsAg A antigens. Direct ELISA shows signal above cut-off at antibody levels of 100ng/test and above

Usage:

This item is for LABORATORY RESEARCH USE ONLY. The product may not be used as drugs, agricultural or pesticidal products, food additives or household chemicals. If supplied in powder then reconstitute it in 100 ul water for 1 mg/ml stock and store in liquid at 4oC for ~1 week or aliquots in suitable size and store at -20oC for long term storage..
