

Product Data Sheet

Cat # RP-1422

SARS-Associated Coronavirus Spike Mosaic S (M) Recombinant

Size: 100ug

SARS Coronavirus is an enveloped virus containing three outer structural proteins, namely the membrane (M), envelope (E), and spike (S) proteins. Spike (S)-glycoprotein of the virus interacts with a cellular receptor and mediates membrane fusion to allow viral entry into susceptible target cells. Accordingly, S-protein plays an important role in virus infection cycle and is the primary target of neutralizing antibodies. 25mM Tris-HCl, 0.4% sarcosyl, 0,25% Triton – 100 and 50% glycerol. Immunoreactive with sera of SARS-infected individuals.

Usage:

This item is for LABORATORY RESEARCH USE ONLY. The product may not be used as drugs, agricultural or pesticidal products, food additives or household chemicals

RP-1422

120430P

Source: The E.Coli derived 38 kDa recombinant mosaic protein contains the middle section of the Spike protein 408-470, 540-573 amino acids immunodominant regions. Purified by proprietary chromatographic technique. Antigen in ELISA and Western blots, excellent antigen for detection of SARS with minimal specificity problems.

Applications and Suggested Dilutions: Protein is >95% pure as determined by 10% PAGE (Coomassie staining). Users must optimize the appropriate concentration and conditions for each assay.

Storage and Stability: Protein is shipped at ambient temperature. Upon arrival, store at -20⁰C. Five year frozen, 6 month at +4⁰C. If supplied in powder then reconstitute it in 100 ul water for 1 mg/ml stock and store in liquid at 4oC for ~1 week or aliquots in suitable size and store at -20oC for long term storage.
