

□ Cat # RP-448

Recombinant Hepatitis B Surface Antigen Adw subtype

Size: □ 10 ug

□ 50 ug

Introduction:

HBsAg is the surface antigen of the Hepatitis-B-Virus (HBV). The capsid of a virus has different surface proteins from the rest of the virus. The antigen is a protein that binds specifically on one of these surface proteins. It is commonly referred to as the Australian Antigen.

Source:

Saccharomyces cerevisiae

Physical Appearance:

Sterile Filtered clear solution.

Formulation:

Sterile Filtered solution containing 10mM phosphate, 145mM sodium chloride and 0.1% NaN₃ as a preservative.

Storage:

If supplied in powder then reconstitute it in 100 ul water for 1 mg/ml stock and store in liquid at 4°C for ~1 week or aliquots in suitable size and store at -20°C for long term storage.

Stability:

HBsAg Should be stored at 4°C between 3-4 weeks and for future use should be stored desiccated below -18°C.

Purity:

Greater than 98.0% as determined by:

- (a) Analysis by RP-HPLC.
- (b) Analysis by SDS-PAGE Coomassie staining.

Application:

HBsAg was tested in ELISA with anti-HBsAg antibodies (capture and conjugate).

Immunochromatography (capture and conjugate).

Immunogen for monoclonal antibody production

Usage:

This item is for LABORATORY RESEARCH USE ONLY.

The product may not be used as drugs, agricultural or pesticidal products, food additives or household chemicals
